Team Plan

Cedric Debelle(cfd363)
 Ahsan Khan (ajk2723)

Ahsan and Cedric met on 11/28/16 and fleshed out a design concept. We partner programmed through the bulk of the process, alternating who was typing and who was reviewing the code. Cedric set up the repository and began modifying the starter code, while Ahsan designed the classes and data structures. Then, Ahsan restructured the code to separate the GUI and the Multithreaded components. Finally, Cedric implemented the remaining functionality, such as the group chat feature and the user lists.
